Stakeholder	Role in the system	Need
Maintenance technician	Reads aircraft history, enters symptoms, opens cited records	Find relevant past cases quickly; avoid repeating a failed repair
Maintenance supervisor	Reviews records the system could not resolve	See both records and the reasoning; accept or reject with a note
Technician (uploading reports)	Loads new records from a CSV or a single entry	Know exactly how many records were created, skipped or duplicated
Project supervisor (evaluator)	Assesses progress	Demonstrable claims that match the code and tests

Only the technician and maintenance-supervisor roles are exercised in this iteration, and they are not yet separated by authentication.
