Aspect	Proposal	Built at Mid, and why
Retrieval	Graph-constrained plus embedding-based hybrid	Graph-bounded with lexical (Jaccard) similarity; embeddings deferred so the baseline is measured first
Ranking	Hybrid evidence score with a historical correction penalty	Deterministic: recency and similarity weights, factor 0.3 for superseded records
Conflict engine	Five-label classifier with human review	As proposed; plus a stored analysis state, a daily budget, and an opt-in cost cascade after we measured 9,175 projected requests
Tenancy and identity	PostgreSQL, organisations, roles	Not built; reviewer identity is therefore not recorded
Sessions	Server-side diagnostic session storage	Client-side state only; the server is stateless
Interface	Chat-centred workspace	Asset-first workspace with a Copilot tab; one-shot diagnose kept as the stable contract
Corpus	About 60 airframes	118 aircraft, because every aircraft with a ground-truth pair is kept first
