Case	Behaviour
Unknown aircraft	404 and “Aircraft not found”, never an empty history
Aircraft looked up by tail number	The history route takes the UUID; a tail number returns 404 (recorded in the contract)
No live model	HTTP 503 with a reason; Copilot returns an empty reply but keeps ranking and evidence
Empty model output	Explicit 503, never a blank success
Invented record identifier	Marked `[UNVERIFIED]` and left out of the valid list
Rate limit	Bounded retries; a daily budget stops runs cleanly
Superseded record in the Copilot	Visible as evidence, excluded from recommendations
Legacy confidence 1.0	Reported as unscored with null confidence
Review action on a record that is not reviewable	HTTP 409; the queue is unchanged
Reject without a note	Rejected by validation (HTTP 422)
Oversize or non-CSV upload	Rejected in the browser before anything is sent
Re-upload of the same CSV	Every record counted as already stored; nothing changes
Unreadable CSV (for example empty)	Backend raises an unhandled error (HTTP 500 without CORS headers), which the browser reports as a network failure; the interface words the message to say so (open issue)
Browser storage denied or corrupt	Copilot remains usable; a warning is shown
