#	Defect	Corrective action	State
1	Frontend CI failed: a review-queue test mock lacked `getRecord`	Mock fixed; storage shim added for the test environment	Fixed
2	Review-queue "Open in asset history" links used tail numbers and led to 404	Resolve the aircraft UUID; show no link if it cannot be resolved	Fixed
3	Deep link did not scroll when the page was still showing its loading skeleton	Scroll effect depends on the loading state	Fixed
4	Service Records issued 1 + 118 requests on load	Fleet-wide paginated endpoint; two page-initiated calls	Fixed
5	Assets list was slow (one history query per aircraft)	Single aggregation query; about 1.0 s on staging	Fixed
6	Placeholder confidence 1.0 and "auto-accepted" shown as a real result	Honest analysis state; placeholders reported as unscored	Fixed
7	Graph requested 200 nodes yet claimed "Capped at 2000"	Request 3,000; truthful counts; warning when the cap is hit	Fixed
8	CSV upload client posted to a route that accepts only a server path; nothing used it	Posts to the upload route; new upload panel	Fixed
9	Small graphs hid their edges behind large nodes	Spacing and node size changed	Fixed
10	Staging fresh diagnoses returned no explanation text	Cause not established (the staging model is smaller); the API reports empty output as 503	Open
11	Unreadable CSV returns an unhandled HTTP 500	Interface wording only; backend change belongs to its owner	Open
12	One staging record has no `ABOUT` link	Re-running ingest repairs it; not applied to shared data without approval	Open
